

K T LIKHITH

Programmer Analyst with 1+ years of experience and a Master's degree in Cloud Computing. Hands-on in building ETL/ELT pipelines, data ingestion workflows, and data transformation using SQL and dbt. Proficient in AWS services including S3, Glue, and Athena. Experienced with Snowflake cloud data warehouse including data migration, ingestion, and transformation. Worked with Docker, and CI/CD pipelines using Jenkins and GitHub Actions. Strong focus on data quality and pipeline automation.

WORK EXPERIENCE

Freelance

Snowflake Projects

Jan 2025 - Present

Project 1: Snowflake Data Ingestion & Transformation

- Implemented Snowpipe for real-time and continuous data ingestion into Snowflake tables.
- Worked with Snowflake Streams for change data capture (CDC) and implemented Slowly Changing Dimensions (SCD).
- Created dbt models for data transformation; used snapshots and macros to manage business logic.
- Performed data validation between Oracle and Snowflake to ensure accuracy during migration.
- Loaded data into Snowflake from internal stages using COPY, PUT, GET, and LIST commands.
- Wrote complex SQL scripts in Snowflake for business analysis and reporting.
- Handled data cleansing — detecting and correcting inaccurate records before loading.
- Created Snowflake objects: databases, schemas, tables, views, stages, sequences, and stored procedures.

Project 2: Snowflake Cloud Data Management

- Loaded data from Azure Blob Storage external stages into Snowflake target tables using COPY statements.
- Wrote complex SQL queries with subqueries and JOINS for data analysis and reporting.
- Used Snowflake features: time travel, data sharing, cloning, secure views, and clustering for performance and governance.
- Cloned database schemas, tables, and procedures across QA and production environments.
- Reduced storage usage by adding transient tables and optimizing clustering column definitions.
- Implemented SnowSQL scripts to load flat file data into Snowflake tables.
- Documented all deliverables for smooth handover to the production team.

Continental Automotive Component India Pvt Ltd

Software Engineering Intern

Jun 2023 - Jun 2024

- Developed synthetic LiDAR data using CarMaker (C++) and visualized point-cloud outputs to support sensor testing and validation.
- Built and maintained a synchronized simulation environment for RDI, CDI, and LDI systems, ensuring stable and continuous test execution.
- Designed custom driving scenarios in CarMaker to enable realistic, repeatable, and automated validation workflows.
- Extracted, processed, and validated camera sensor image data using dSPACE tools for accuracy and reliability.
- Generated synthetic camera sensor data and implemented custom validation scenarios using dSPACE to simulate real-world conditions.

Cognizant Technology Solutions

Programmer Analyst

Oct 2021 - Nov 2022

- Designed and developed scalable ETL/ELT pipelines for ingesting structured and semi-structured data.
- Created and managed automated workflows using Apache Airflow, including scheduling, dependencies, and error handling.
- Wrote optimized SQL for validation, cleansing, aggregation, and transformation across multiple data platforms.
- Implemented CI/CD pipelines using GitHub Actions and Jenkins for automated build, test, and deployment workflows.
- Worked on dbt Core and dbt Cloud to build modular transformation models, implement data quality tests, automate documentation, and manage environment-based deployments.
- Collaborated with cross-functional teams to define data requirements and ensure data accuracy and availability. Documented ETL processes, data models, and technical workflows.

EDUCATION

Manipal School of Information Sciences (MSIS), MIT, Manipal

Master of Engineering, Cloud Computing - 8.59

Sep 2022 - Sep 2024

K.V.G College of Engineering, Sullia, DK

Bachelor of Engineering, CSE - 7.95

Aug 2017 - Aug 2021

PROJECTS

CI/CD Pipeline for Node.js Web Application

- Built an end-to-end CI/CD pipeline on AWS EC2 using Jenkins automated build, test, and deploy stages triggered by Git commits
- Stored build artifacts in Amazon S3 and deployed applications using AWS CodeDeploy with custom AMIs and launch templates
- Configured Auto Scaling Groups and Application Load Balancers for high availability and zero-downtime deployments
- Integrated AWS CloudWatch to monitor error rates, latency, and resource usage set alarms for critical threshold breaches

Real World Capabilities of Data pipeline

- Developed a data pipeline using MinIO, Apache Spark, and Apache Iceberg.
- Dockerized Apache Spark, Iceberg, MinIO, and Jupyter Notebook for seamless deployment.
- Executed queries and captured data snapshots, storing them in MinIO buckets for efficient data management.

SKILLS

Programming: SQL, C++

Data Warehousing: Snowflake

ETL/ELT & Pipelines: Snowpipe, Streams, SCD, dbt, Data Ingestion, Data Transformation

Cloud: AWS S3, AWS EC2, AWS CloudWatch, AWS CodeDeploy, Azure Blob Storage

CI/CD & DevOps: Jenkins, Docker, Kubernetes, GitHub Actions, Git

Project Management: JIRA
