

K T LIKHITH

Production Support Engineer | Cloud & DevOps Support
+91 85468 72758 · ktlikhith.naik22@gmail.com · linkedin.com/in/ktlikhith · Bengaluru, India

PROFILE SUMMARY

- Production Support & Cloud Operations professional with 1+ year of hands-on experience and a 1-year full-time technical internship, backed by a Master's degree in Cloud Computing.
- Managed **80–90 tickets/day** at Cognizant with **98–99% SLA compliance** — used **AWS CloudWatch** to monitor CPU, memory, and API performance; configured alerts for critical thresholds; and analyzed **4xx/5xx logs** to proactively detect and resolve production issues.
- Skilled in structured **RCA**, incident lifecycle management via **ServiceNow/JIRA**, and cross-functional escalation — with additional hands-on experience in **CI/CD pipelines**, **Docker**, and **Linux** bridging production support with DevOps practices.

TECHNICAL SKILLS

Monitoring & Observability: AWS CloudWatch (Metrics, Logs, Alarms), Log Analysis, Application Performance Monitoring, Alert Configuration

Cloud & DevOps: AWS (EC2, S3, CodeDeploy, Auto Scaling, Load Balancers), Docker, Kubernetes, Jenkins, CI/CD Pipelines, Git, Linux

Support & ITSM: Production & Application Support, Incident & Problem Management, Root Cause Analysis, SLA Management, ServiceNow, JIRA, Release & Deployment Support

Development & Data: HTML, CSS, JavaScript, SQL, Snowflake, C++

PROFESSIONAL EXPERIENCE

Programmer Analyst

Cognizant Technology Solutions

Oct 2021 – Nov 2022 (1 yr 2 mos)

Bengaluru, India

- Managed high-volume production support queue of **80–90 tickets/day** via ServiceNow and JIRA, consistently achieving **98–99% SLA compliance** through structured P1/P2 prioritization and timely escalation
- Monitored application health using **AWS CloudWatch** — tracked CPU utilization, memory consumption, and API response times; configured **CloudWatch alarms** for critical thresholds to proactively detect issues and reduce MTTD
- Analyzed application logs to identify and triage **4xx/5xx HTTP errors**, API failures, and latency spikes — correlated log patterns with infrastructure metrics to rapidly isolate root causes
- Performed structured **Root Cause Analysis (RCA)** for recurring production incidents, documented findings, and drove permanent fixes with development teams to eliminate repeat failures
- Developed and maintained web applications using HTML, CSS, and JavaScript — implemented new features, resolved bugs, and optimized performance to improve user experience
- Executed **SQL queries** to verify production data integrity, validate records during incident triage, and cross-check application behaviour against database state
- Supported production deployments by validating release health and tracking post-deployment metrics; maintained RCA reports, incident runbooks, and knowledge base articles to improve first-time resolution rates

Software Engineer Intern, Full-Time

Continental Automotive Components India Pvt. Ltd.

Jun 2023 – Jun 2024 (1 yr)

Bengaluru, India

- Maintained and supported complex Linux-based simulation environments, ensuring high availability and operational stability for automotive sensor validation workflows
- Monitored simulation system health across RDI, CDI, and LDI environments — troubleshooted performance bottlenecks and environment failures to minimize test downtime
- Collaborated with cross-functional testing and validation teams to diagnose issues, implement fixes, and maintain configuration runbooks for faster incident resolution
- Automated test scenario creation using CarMaker (C++) to enable consistent, repeatable validation processes and reduce manual effort

TECHNICAL PROJECTS

CI/CD Pipeline with Monitoring — Node.js Application

AWS EC2, Jenkins, CodeDeploy, CloudWatch, Git

- Built end-to-end CI/CD pipeline using Jenkins on AWS EC2 with Git-triggered builds, CodeDeploy deployments, and Auto Scaling with Load Balancers for high availability
- Integrated AWS CloudWatch to monitor post-deployment application health, track error rates, and set alarms for performance threshold breaches

Containerized Data Pipeline

Docker, Apache Spark, MinIO, Apache Iceberg

- Designed and deployed a fully Dockerized data pipeline using Apache Spark, Iceberg, and MinIO — enabling consistent environments, data versioning, and scalable analytics

EDUCATION

Master of Engineering – Cloud Computing

Manipal School of Information Sciences, MAHE

Sep 2022 – Oct 2024

CGPA: 8.59/10

Bachelor of Engineering – Computer Science & Engineering

K.V.G College of Engineering, Sullia

Aug 2017 – Aug 2021

CGPA: 7.95/10

CERTIFICATIONS

AWS Academy Cloud Foundations · AWS Academy Cloud Security Foundations
